

## Stud Cap Usage Options

What started out as being the RAD-3SC lighthouse assembly has transformed the Stud Cap into a stand alone unit. The Stud Cap is hard anodized, and TriPlex processed, which gives it added durability and stability when being mounted on studs.

The stud cap mounts can be made specifically for the various size studs found in the nuclear industry. The mounting pattern can accommodate 3/8" bolt holes offset at 45 or 60-degree increments. This allows different utilities to design and fasten cameras, lights, pan and tilts, etc. to the studs as needed for each outage.
